

End User System Requirements

The e-learning content will work on many different hardware levels, some courses will require more than these minimum requirements. If this is the case the minimum requirements will be included in the course information.

The following is an example of a minimum-specification PC (or Mac) that would be expected to deliver a rich, interactive user experience:

- PC or Mac
- Microsoft Windows Xpor above, Mac OS X 10.5 (Leopard)
- 32-bit colour graphics
- Keyboard and mouse.

The browser requirements are as follows:

- Microsoft Internet Explorer 6 or above
- Firefox 3 or above
- Safari version 4 and above
- Client-side JavaScript enabled for admin pages
- Flash player version 7 or above (if Flash is used in the solution).

As e-learning is usually delivered online we would recommend the following bandwidths for internet access:

- Minimum bandwidth: 256 kbps
- If using video: 512 kbps
